Assignment details

- **Due:** Week 13 (in-class)
- **Weighting:** 25%
- **Submission type:** Live group presentation

Overview

As you enter the final phase of the Datathon, your team will deliver a **live group presentation** showcasing the outcome of your Datathon work.

The focus of this presentation is a **simple software prototype** that demonstrates how your analysis or model could be used in practice. This prototype should be grounded in the work you completed during the Datathon and clearly motivated by your findings.

The software prototype

Your prototype should be:

- Simple and focused
- Directly informed by your Datathon analysis
- Designed to demonstrate insight, functionality, or decision support rather than technical polish

The prototype may be based on:

- Exploratory data analysis and insights, or
- A predictive or AI model you have developed

A **simple, well-explained prototype is preferable to a complex but poorly justified one.**

Presentation format

- **10-minute live group presentation**
- **5 minutes for questions**
- Delivered during your allocated lab session in **Week 13**
- **All group members must participate in the presentation**

Audience questions and feedback may be collected during the session and shared with your group after the presentation.

What your presentation should cover

Your presentation should clearly and concisely address the following:

- **Why you selected your topic and dataset(s)**

- **Summary of your key work**, such as:
 - Data cleaning
 - Exploratory data analysis
 - Modelling or AI approaches (if applicable)
- **Your software prototype**, including:
 - What it does
 - What decisions or insights it supports
 - Why it is useful
- **Reflections and limitations**, including what you would improve with more time

Assessment focus

This assessment prioritises **clarity of thinking and justification over technical sophistication**.

We are particularly interested in:

- How you interpret results
- How you make and justify design decisions
- How well you can explain the implications of your analysis or model

You may use generative AI tools to support development, but **you must be able to explain and justify all decisions made**.

Academic Integrity

You are required to take part in your education in an honest and ethical manner. Failure to comply with assessment rules and University policies could result in you being investigated and penalised by the University for an [academic integrity breach \(https://www.sydney.edu.au/students/academic-integrity/breaches.html\)](https://www.sydney.edu.au/students/academic-integrity/breaches.html).

We use Turnitin to help detect potential academic integrity breaches. In some cases, your instructor will permit multiple attempts for the assessment and will allow you to view the Turnitin report immediately, which you can use to help revise your submission and then resubmit. For help understanding the report, visit the [Turnitin guide for students \(https://guides.turnitin.com/hc/en-us/articles/23713493434253-Understanding-the-similarity-score-for-students\)](https://guides.turnitin.com/hc/en-us/articles/23713493434253-Understanding-the-similarity-score-for-students).

Compliance statement

In submitting this work, I (or we, in the case of a group submission) acknowledge that:

- I have read and understood the [Academic Integrity Policy \(https://sydney.edu.au/policies/showdoc.aspx?recnum=PDOC2012/254&RendNum=0\)](https://sydney.edu.au/policies/showdoc.aspx?recnum=PDOC2012/254&RendNum=0), and where relevant, the [Research Code of Conduct \(https://www.sydney.edu.au/policies/showdoc.aspx?recnum=PDOC2013/321&RendNum=0\)](https://www.sydney.edu.au/policies/showdoc.aspx?recnum=PDOC2013/321&RendNum=0), and that this assessment submission complies.
- I have complied with all rules and referencing requirements set for this assessment task, including correctly acknowledging the use of any [generative AI tools \(https://www.sydney.edu.au/students/academic-integrity/artificial-intelligence.html\)](https://www.sydney.edu.au/students/academic-integrity/artificial-intelligence.html) or assistance from others such as copyediting or proofreading.
- The work has not previously been submitted in part or in full for assessment in another unit unless permission has been given by the unit of study coordinator.

- Engaging another person to complete part or all of the submitted work will, if detected, lead to proceedings for potential student misconduct under the [University of Sydney \(Student Discipline\) Rule](http://sydney.edu.au/policies/showdoc.aspx?recnum=PDOC2017/441&RendNum=0) (<http://sydney.edu.au/policies/showdoc.aspx?recnum=PDOC2017/441&RendNum=0>).

You should keep copies of your assignment submission, drafts, AI outputs and research materials for one year.

✓ **View Rubric**

Datathon Prototype Presentation (15 minutes)

Criteria	Ratings				Points
Importance and Framing of the Problem	Excellent Insightful and well-contextualised framing of the problem, clearly linking stakeholders, decisions, and data context. 4 to >3.36 pts	Exceeds expectations Clear and relevant framing of the problem with good contextualisation, though some nuance or depth may be missing. 3.36 to >2.8 pts	Meets expectations A clear and reasonable description of the problem and why it matters, with basic consideration of stakeholders or data. 2.8 to >2 pts	Does not meet expectations Problem framing is vague, generic, or poorly connected to context or data. 2 to >0 pts	/4 pts
Analysis Strategy and Technical Reasoning	Excellent A well-justified analysis strategy that clearly explains why methods were chosen, informed by iteration, experimentation, or evidence. 6 to >5.14 pts	Exceeds expectations A logical and appropriate analysis strategy with good justification, though some choices could be explained more deeply. 5.14 to >4.2 pts	Meets expectations An appropriate analysis approach that broadly makes sense for the problem and data, even if justification is brief or high-level. 4.2 to >3 pts	Does not meet expectations Analysis strategy is unclear, poorly justified, or generic. 3 to >0 pts	/6 pts
Findings, Interpretation, and Recommendations	Excellent Findings are clearly interpreted in context, with thoughtful implications or recommendations grounded in results. 4 to >3.4 pts	Exceeds expectations Findings are well explained with reasonable interpretation and some discussion of implications. 3.4 to >2.9 pts	Meets expectations Key findings are described accurately, with limited but reasonable interpretation. 2.9 to >2 pts	Does not meet expectations Findings are vague, poorly explained, or disconnected from the problem. 2 to >0 pts	/4 pts

Criteria	Ratings				Points
Prototype Design and Application view longer description	Excellent A purposeful and well-explained prototype that clearly demonstrates how insights or predictions support decisions or actions. 5 to >4.29 pts	Exceeds expectations A functional and relevant prototype with a clear purpose, though limitations or decision impact may not be fully articulated. 4.29 to >3.5 pts	Meets expectations A simple prototype that demonstrates some application of the analysis, even if functionality or relevance is basic. 3.5 to >2.5 pts	Does not meet expectations Prototype is missing, unclear, or poorly connected to the analysis. 2.5 to >0 pts	/5 pts
Communication, Structure, and Engagement	Excellent Clear, engaging, and well-paced presentation, appropriate for a broad audience, with strong group participation. 2 to >1.7 pts	Exceeds expectations Clear and organised presentation with minor issues in pacing, clarity, or engagement. 1.7 to >1.4 pts	Meets expectations Presentation is understandable and structured, though delivery or engagement may be uneven. 1.4 to >1 pts	Does not meet expectations Presentation lacks clarity, structure, or equitable participation. 1 to >0 pts	/2 pts
Questions and Suggestions for Other Groups view longer description	Excellent Questions or suggestions are insightful, constructive, and demonstrate strong understanding of the other group's problem, analysis, or prototype. Contributions meaningfully challenge assumptions, explore implications, or suggest clear and relevant improvements. 4 to >3.43 pts	Exceeds expectations Questions or suggestions show good critical engagement and understanding of the presented work, with clear relevance and reasonable depth. 3.43 to >2.8 pts	Meets expectations Questions or suggestions are relevant and appropriate but largely descriptive or surface-level, with limited critical depth. 2.8 to >2 pts	Does not meet expectations Questions or suggestions are minimal, unclear, generic, or show little engagement with the presented work. 2 to >0 pts	/4 pts
Project collaboration bonus view longer description	Adequate +0.5 or +1 0 pts	Excellent +1.5 or +2 0 pts		No bonus 0 0 pts	/0 pts

Criteria	Ratings			Points
Sparkplus completion view longer description	Completed at or after presentation 10% penalty to final presentation 0 pts	Completed prior to presentation No penalty 0 pts	Incomplete 20% penalty to final presentation 0 pts	/0 pts
